A black and white photograph of two female scientists in a laboratory. The scientist on the left is holding a pipette and looking at it, while the scientist on the right is looking at the same point. They are both wearing white lab coats. In the background, there are laboratory shelves with various equipment.

Our missions

- ✓ **To understand** the basic processes of the Earth and Life system at various scales
- ✓ **To reduce** the uncertainty about the Earth and Life processes behaviour
- ✓ **To generate knowledge** allowing the design of sustainable solutions for managing critical Earth and Life resources (natural resources, biodiversity, climate, food, soil, water,...) and for supporting the major transition shift
